STAFFING & RESOURCES

CHALLENGES

Security Gaps

The firm had basic security tools like antivirus and firewall in place, but the bulk of its controls were focused on meeting compliance regulations rather than improving security. When a new Director of Information Security joined the firm, he recognized the need to quickly improve the organization's security program. Sophisticated and commodity attacks could easily bypass the firm's existing tools without anyone knowing.

Lacking Visibility and Detection

Understanding the critical nature of the information that they are charged to protect, the firm was ready to invest in stronger endpoint controls. Its security director recognized investigations were taking too long and they sometimes lacked the necessary information. They began looking at Carbon Black Response, a leading Endpoint Detection and Response (EDR) solution, because it would provide deep visibility into user and endpoint activity. However, the firm did not have the resources in place to continuously hunt for, investigate, and respond to threats. Building a program would take years—and an immediate solution was necessary.

VS

NEEDS

- Rapid security improvements to safeguard sensitive client data
- Better visibility across the environment
- Ability to isolate and remediate hosts regardless of the user's location

- Continuous endpoint monitoring and hunting to identify targeted attacks by foreign entities
- Deep technical expertise with Carbon Black Response.
- Team of experts to hunt, investigate, and respond to threats to prevent breaches

SOLUTION

A Trusted Partner

The Director had previously partnered with Red Canary and was impressed with the team's deep security expertise. Deploying Red Canary enabled the firm to quickly level up its security program and get results on day one. Benefits included visibility across endpoints, continuous hunting and threat detection, investigation of every potential threat, and remote remediation tooling. The Director gained confidence that sensitive client data was secured against even the most advanced attacks.

Continuous Hunting & Investigation

The firm knew that Red Canary had deep expertise using Carbon Black technology. Once the Security Director saw that Red Canary could use the endpoint data Carbon Black collected in order to provide continuous monitoring, hunting, and response, he decided to implement the solution as a core layer of defense. The firm trusts Red Canary to examine all of their endpoint activity and identify threats, allowing the internal team to focus on other priorities across the security program.

RED CANARY TYPICAL PERFORMANCE OVER 30 DAYS

About Red Canary

Red Canary helps the world's largest and most prestigious law firms secure client data against attacks. The cloud-based service combines advanced engineering with deep expertise in security operations and incident response to help defenders prepare for, identify, and eradicate threats.
