

USING MITRE ATT&CK™ TO IMPROVE DETECTION COVERAGE

Detecting the modern adversary means continuously expanding your detection coverage. MITRE ATT&CK™ is the foundation of Red Canary's approach to improving threat detection and response.

IMPROVE

How will we stay ahead of adversaries?

Detection engineering constantly improves efficiency by developing new automated detectors and enhancing operational processes.

TEST

Can we detect adversary techniques?

Our researchers use Atomic Red Team and advanced data analysis to validate detection capabilities against ATT&CK techniques and evolving threats.

EVALUATE

Where are our gaps?

Threat detections are mapped to ATT&CK so defenders can easily understand and measure coverage.

See how Red Canary integrates ATT&CK
to stay ahead of adversaries.
