# Gain a Complete EDR Capability

red canary **+** Carbon Black.

Red Canary layers on top of Carbon Black Response to quickly and accurately detect threats on customers' endpoints and provide them with the intelligence and tooling they need to respond.

| 1 | Complete EDR capability on Day 1 |
| 2 | No alert fatigue; only see confirmed threats |
| 3 | Rapid response with just a few clicks |

| What's Included | Description | Value |
|---|---|---|
| **HARDWARE** | Cb Response server hosting, management, and software upgrades | No need to manage hardware |
| **BEHAVIORAL DETECTION** | Extensive behavioral detection criteria that covers initial compromise through post exploitation | No need to set up and manage watchlists |
| **CYBER INCIDENT RESPONSE TEAM** | Triage and investigation into every potential threat | No alert fatigue; save time by eliminating the need to investigate false positives |
| **REPORTING** | Detection reporting that includes information about what happened, the impacted endpoint/user, and a timeline detailing the progression of the attack | Quickly understand the threat and its scope |
| **RESPONSE** | Automated response capabilities built into Red Canary's detection reporting | Immediately control a threat with a few clicks |
| **EXPERTISE** | Our incident handling and support teams ensure proper deployment, configuration, and ongoing operations | Unlimited access to technical resources to answer all questions |

## FAQs

- **What types of threats does Red Canary detect?**

  Red Canary is continually analyzing endpoint activity for threatening behaviors typically associated with an attack. Some example behaviors include establishing persistence, lateral movement, credential harvesting, and credential escalation. Example threats include malware, crimeware, zero-days, insider threats, and malwareless attacks.

- **What is Red Canary's false positive rate?**

  Well below 1%

- **How easily will Red Canary integrate with other products and/or services?**
  - Red Canary is built on an open API like Carbon Black Response and can integrate with most tools/services
  - Red Canary can partner with customers' managed service providers and has many customers using multiple managed offerings

- **How is Red Canary different than traditional MSSPs?**
  - Red Canary offers a custom-built solution that is solely focused on quickly detecting the breadth of threats on customers' endpoints and ensuring customers are able to respond
  - Red Canary does not manage any other product categories and dedicates all resources toward improving endpoint detection and response

"Red Canary has the ability to master Carbon Black data and detect threats as they happen. We have been able to use their detections to immediately stop threats. We haven't seen the same level of expertise with any other vendor."

**- Director of Technology, Private Investment Firm**

"If we didn't bring in Red Canary, I would still be overwhelmed with alerts and struggling to improve my environment. They specialized in Carbon Black Response and it was very evident from the service and partnership we received from them."

**- Information Security Architect, Global Biotech Corporation**
